

Ballast roller

In order to ensure peace of mind and peace of mind in view of a possible flood, MegaSecur offers you the ballast roller to hold the barrier more firmly to the ground.

MegaSecur

A Canadian designer, manufacturer and distributor, MegaSecur is the world leader in flood control solutions. In addition to its Water-Gate self-blocking flexible dam, it offers a pump system specially designed to help you control possible flooding.

The ballast roller has been designed to create a uniform weight over the entire length of the area to be covered while following the relief of the terrain.

It is easy and quick to handle, as it has a sturdy handle. In addition, the ballast roller being permeable, no liquid can accumulate inside. It is reusable, ecological and UV treated. Very resistant to blows and abrasion, it is quick to deploy, clean, flexible and requires little storage space. The rolls cling together, drain well and dry quickly. They resist frost, are not prone to mildew and are easily cleaned with a simple watering.

The weight of the full ballast roll is 30 lbs / 13.5 kg. Lying on the ground, it covers an area of 9" x 10" / 23 cm x 3 meters. Rolled up, it represents a width of 9" x 11" diameter / 23 cm x 28 cm Ø. It is made of polyester mesh and can be handled hundreds of times.

It is offered filled with 1/4 / 6 mm gravel and bearing the order number SP-9100 or offered without gravel with a weight of only 1 lb / 0.4 kg. The filling of gravel inside the ballast roller is easy to do and requires no tools both to fill it and to close it tightly, its order number is: SV-9100.
