

MegaSecur

Canadian Company: Creator, Manufacturer, Distributor and World Leader in solutions and environmental safety regarding water with its product **WATER-GATE** (modular and self-locking water dams) that contributes to the protection of communities from here and elsewhere (37 countries) for more than 20 years.

The concept of the Water-Gate is simple: **it's the weight of the water that stops the water.** Its unique design makes it possible for the water to enter inside the fabric and it stabilizes the barrier instantaneously.

- ✓ The *Water-Gate Flood Series* is especially **developed with a ballast** built into the front flap of the barrier to provide a better control of the water;
- ✓ **Deploy the Water Dam in a very short period of time** while the water has already started;

WATER-GATE

Water-Gate FLOODS

Adjusts to all areas of intervention, without anchoring, whatever the nature of the ground.

✓ The *Water-Gate Flood Series* is available in different size of protection up to 5 feet (1,5 m), at any length.

✓ The Water Barrier is made of strong material (polyester fabric coated with High-strength PVC), a superior quality fabric resistant to corrosion and toxic products;

✓ In addition to being flexible and portable, its use can be for short/long duration. The barrier can be stored for a longer time without impacting its efficiency and durability.
